

## Requirement to Run Ice\_Scraper.php

1. Download Curl for PHP. I am using Ubutnu so I followed these instructions:

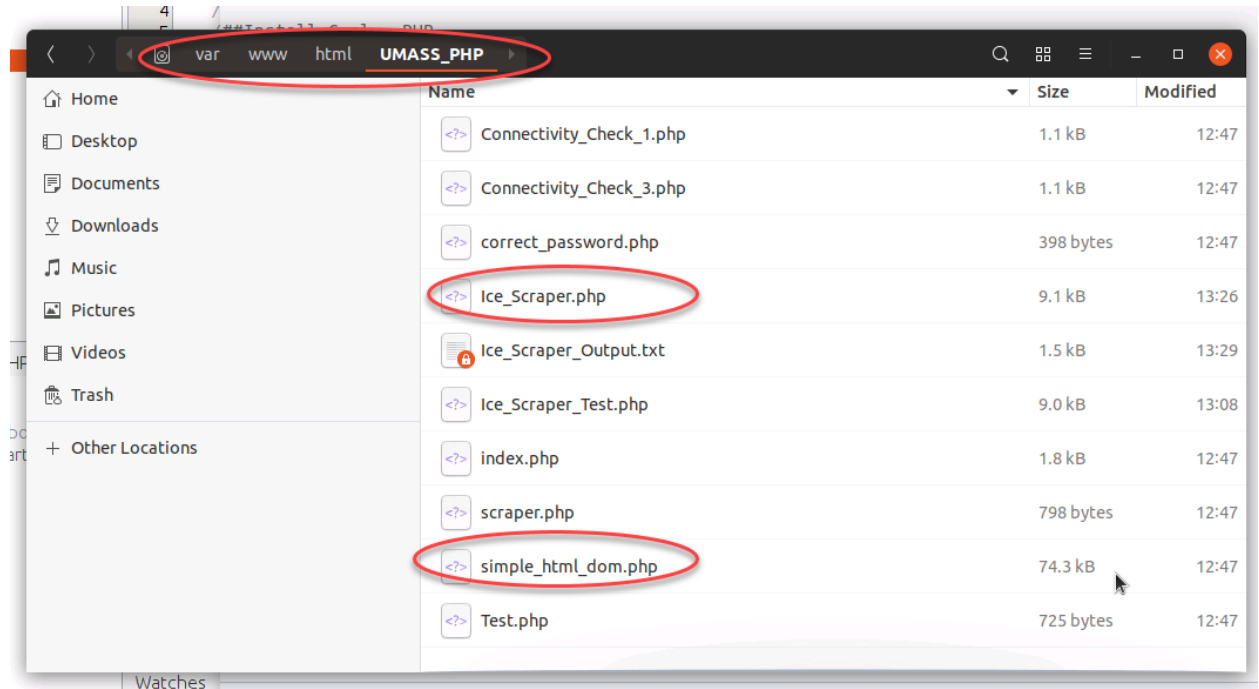

<https://linuxconfig.org/how-to-enable-and-disable-php-curl-module-with-apache-on-ubuntu-linux>

2. Install PHP-XML.

- a. In command line run: `sudo apt-get install php-xml`

3. In attached zip file, make sure the following program is in the same location as my script:

- a. Simple\_html\_dom\_.php

4. Run Script and you will see this:
